

## Page Setup

**Card Size:** 86x54mm

**Safe Zone:** 82x50mm

**Bleed:** +3mm to each side

Start by setting your page size to 86x54mm (landscape or portrait). Or to 89x57mm for full bleed/over-the-edge print requirements.

Important text and images should be kept inside the 82x50mm safe-zone to keep the card design balanced and to avoid cut-off during print.

## Colours

Please set your colour profile to **CMYK 8-bit**. When creating your design, keep in mind:

- RGB colours are converted during the print process
- Final printed colours might print a shade darker/more contrasted than they appear on your screen.
- If your design is being printed onto a coloured or metallic effect PVC card, printed colours will vary.

## Fonts

- Please **convert all fonts** to curves/outlines/flatten if providing PDFs.
- Font sizes of 5pt or more are recommended for easy to read texts, though fonts can be as small as 1.5pt (microtext).

## Graphics & Resolution

Please ensure all graphics or images included in your designs are at least 300dpi, and that you export your artwork at 300dpi or more before sending it to us for print.

Please **convert all fonts** to curves before exporting as PDF files.
